Boletín Latinoamericano y del Caribe de Plantas Aromáticas y Medicinales

an Open Access Journal by MS-EDITIONS

Editor-in-Chief

José L. Martínez

Message from the Editor-in-Chief

The Latin American and Caribbean Bulletin of Aromatic and Medicinal Plants (BLACPMA, in Spanish) is a bimonthly international publication that publishes original peer-reviewed research in the field of medicinal and aromatic plants, with almost 20 years of experience that brings together researchers of diverse areas of the study in medicinal plants with the common objective of contributing in the investigation of these sciences. The journal provides unlimited free access to all those readers, both researchers and the community in general, interested in advancing the science of medicinal plants. BLACPMA is supported by our authors and their universities through low Article Processing Charges (APC) for those papers that are accepted. We cordially invite you to support the journal by becoming one of our authors.

Author Benefits

Open access

Unlimited and free access for readers

Discounts on APC

If you reside in a country belonging to the MS-EDITIONS payment facilities program

No Copyright Constraints

Retain copyright of your work and free use of your article

Thorough Rigorous Peer-Review

Coverage by Leading Indexing Services

SCIE-Science Citation Index, Expanded (Web of Science), Scopus (Elsevier)

No space restrictions, no extra space or color charges

No restrictions on the length of the papers, number of shapes or colors

Objectives and scope

Our goal is to encourage scientists to publish their experimental and theoretical research in as much detail as possible and in this way contribute to the development of science in medicinal plants. For these investigations to be published, full experimental and/or methodical details must be provided for the original articles and, in the case of review articles, these must be presented in the English language.

The scope of the BLACPMA includes:

- Ethnobotany and ethnopharmacology of medicinal plants
- Phytochemistry, extraction, isolation and structural elucidation of bioactive compounds
- Activities of bioactive compounds of medicinal plants in biological systems
- Genetic resources and agroecology of medicinal plants
- Organic synthesis of natural medicinal products, structure-activity relationships
- Advanced analytical techniques applied to natural products
- Quality control, development and innovation in natural products
- Biotechnology applied to the cultivation, conservation and propagation of medicinal plants
- Therapeutic applications and clinical trials with medicinal plants
- Regulations and legal aspects of medicinal plants
- Review Articles.
